INTRODUCTION

FOREWORD

This report summarizes data compiled from original birth, death, fetal death, marriage, and dissolution (of marriage) records filed with the Office of Vital Statistics (VS) as required by law. Standard forms recommended by the U.S. Public Health Conference on Records and Statistics are for the most part used for certificates of birth, death and fetal death.

Responsibility for filing birth certificates lies with the physician, midwife or other attendant. Funeral directors, or other persons acting as such, are legally charged with filing death and fetal death (of 20 or more weeks gestation) certificates. These certificates are then submitted to local registrars who in turn forward them to VS. Marriage and dissolution records are received by VS directly from the various courts.

RESIDENT AND RECORDED EVENTS

Births and deaths are tabulated according to both the usual "place of residence" (events occurring to Florida residents regardless of the place of occurrence) and the "place of occurrence" (events occurring in Florida regardless of the usual place of residence). The former are herein referred to as "resident" events and the latter as "recorded" events. Prior to 1933, only recorded data are available.

Varying interpretations of the "usual place of residence" by Florida's many seasonal visitors and military families may influence the accuracy of resident tabulations to some extent, since the residence stated on the certificate is normally accepted without question. For births and fetal deaths, the mother's residence is used when it differs from the father's residence.

Marriage and dissolution of marriage data are by place of occurrence only; there is no interstate exchange of these records. However, Florida dissolutions of marriage are granted to legal residents only; so there can only be resident dissolutions.

AVAILABILITY OF DATA

In addition to data presented here, data in greater detail from unpublished tables, and special statistical tapes are available upon request on a fee-for-service basis. Information concerning data available from these sources may be obtained from the Public Health Statistics Section, P.O. Box 210, Jacksonville FL 32231-0042; Telephone (904)359-6960 or Suncom 826-6960.

HISTORICAL BACKGROUND

This marks the 72nd year of statewide collection of birth and death records, which began in 1917. Marriage and dissolution records have been filed with VS since June 1927.

CAUSE OF DEATH

The underlying cause of death is determined from death certificate medical information in accordance with procedures established by the World Health Organization (WHO) and the National Center for Health Statistics (NCHS). Standardized codes are assigned from the International Classification of Diseases (ICD).

To keep abreast of changes in medical knowledge, the ICD is revised approximately every ten years. Revisions and years used in Florida are:

Revision	Years	Revision	Years
Second	1917-1920	Sixth	1949-1957
Third	1921-1929	Seventh	1958-1967
Fourth	1930-1940	Eighth	1968-1978
Fifth	1941-1948	Ninth	1979-

Due to these revisions, some of which involve major changes, year-to-year comparisons of deaths by cause can be misleading, unless such comparisons span a period of years in which only one revision was used or in which the changes from one revision to another were minor.

The Ninth Revision contains major modifications of some sections, so that more or less deaths are now (Ninth Revision) assigned to certain causes than under Eighth Revision rules. NCHS coded a sample of 1976 U.S. deaths by both the Eighth and Ninth Revision rules. The results were grouped by major causes and, for each of these, the number of Ninth Revision deaths was divided by the number of Eighth Revision deaths to produce a comparability ratio. For example, the comparability ratio for Suicide is 1.0032; this means that Ninth Revision coding of 10,000 death certificates will produce about 32 more Suicides than would Eight Revision rules.

INTRODUCTION
(cont'd)

POPULATION

Resident midyear population estimates for 1980 to 1989 were obtained from the Florida Population and Demographic Forecasts provided by the Office of Planning and Budgeting, Executive Office of the Governor. These estimates are being utilized pursuant to the data standardization resolution adopted by the Governor and Cabinet of the State of Florida at the Florida Concensus Estimating Conference. U.S. data obtained from the Bureau of Census, Current Population Reports, Series P-25, Number 1022.

RACE

Race is usually counted as it is stated on birth, death, and marriage certificates, with such designations as "Hispanic" counted as white. For births, the race of the child is determined as follows; (1) White, if both parents are white or if one is white and the other is unknown or not stated, (2) Nonwhite, in all other cases where the race of at least one parent is known, or (3) Unknown, only when the race of both parents is unknown or not stated. Specific nonwhite races are assigned according to a somewhat complex coding procedure, copies of which are available upon request. The 1970 U.S. Census for Florida showed a population that was 15.3 percent black and 0.4 percent for all other nonwhite races. The 1980 U.S. Census showed 13.8 percent black and 2.2 percent for all other nonwhite races. This increase in the other nonwhite races results mainly from changes in the Census Bureau's definitions.

UNKNOWNS

Tabular totals in this publication may include some records of unknown age, race, or sex. In these cases, the components shown will not add to the total given.

COMPLETENESS OF DATA

Tabulation of data for this annual report was begun after allowing a reasonable time for receipt of late records. A few certificates are received after tabulation and thus are not included in this report. These records represent a very small fraction of the total, and their omission does not materially alter the facts presented.

COMPUTATIONS AND FOOTNOTES

The following procedures and symbols are used in all tables in this report:

(1) All rates and ratios are rounded to the nearest tenth.
(2) All rates and ratios that calculate to less than 0.05 are printed as "0.0".
(3) Undefined or anomalous rates and ratios, i.e., those with denominators of zero, or those that calculate to greater than 99.9 percent of the rate/ratio multiplication factor, are printed as "---".
(4) Unreliable rates and ratios, i.e., those with demoniators less than 100, are followed by an asterisk "*".
(5) All age-adjusted death rates (AADR) are standardized to the U.S. 1940 standard population.

POPULATION

Florida's population continued to increase in 1989, up 2.7 percent from 1988 and 30.6 percent since 1980. However, despite this increase, the 1980-89 annual average growth rate of 3.0 reveals a 16.7 percent decrease compared to the 1970's where the growth rate averaged 3.6 percent annually. The whites and nonwhites both experienced growth rate declines of 19.4 and 2.8 percent, respectively, when comparing the 1980-89 annual averages with those from 1970-79 data.

The average annual numerical increase in population for 1980-89 of 334,224 has shown an increase from the average of 268,476 for the 1970's. The average monthly net in-migration of 24,368 increased 8.9 percent from the previous decade.

Comparing Florida's population to that of the U.S., the nonwhite population accounted for 15.3 percent of the state total population in 1989, the same percent as the U.S. in 1988 (the latest U.S. figures available). The 65 and over age group accounted for 17.6 percent of Florida's 1989 population, well above the U.S. figure of 12.2 percent in 1988. The 14 and under age group comprised 19.0 percent of Florida's population in 1989 versus 21.5 percent nationally in 1988 (Table A).

Based on 1980 data, all four race/sex groups continue to show increases in life expectancy birth. White females continue to have the greater expectancy at 78.9 years; followed by nonwhite females, 72.4; white males, 71.1; and nonwhite males, 63.8. Prior to 1980, white males had a greater expectancy at birth than nonwhite females, but that has since changed, while white females and nonwhite males maintained their most favorable and unfavorable positions, respectively (Table B).

BASED ON DATA FURNISHED BY OFFICE OF PLANNING AND BUDGETING, EXECUTIVE OFFICE OF THE GOVERNOR.

LIVE BIRTHS

The general fertility rate in 1989 has increased by 2.2 percent over the 1988 fertility rate. Since the mid-1970's there has been a slow rise in the rate. The general fertility rates and the median age of mothers, for both whites and nonwhites, have also followed this pattern. The age specific fertility rate for age groups less than 15 through 40-44 are increasing while the fertility rate for ages 45+ has remained constant (Table D).

Live births to Florida residents continue to increase both in number and rate, as they have since 1976. From 1988 to 1989 the number of live births rose by 4.8 percent, while the rate increased by only 2.0 percent. Both whites and nonwhites also reflect this general pattern, however, the rate for nonwhites remains nearly double the rate for whites (Table E).

The 1989 total low-weight live births percent showed no change form the 1988 percent of 7.7. Low-weight births for white male was 5.4 percent in 1989, a decrease over the 1988 figure. The white female and nonwhite male percentages increased to 6.6 and 11.4 percent respectively, while the nonwhite female percent remained unchanged. Studies have revealed that the risk of neonatal mortality is much greater for low-weight births as opposed to "normal" weight births. Low-weight births are classified as those less than 2500 grams or 5 1/2 (Table F).

Physicians continue to be the attendants to about 90 percent of all live births for both whites and nonwhites. Despite this large percentage, physician deliveries have revealed a declining trend while midwife deliveries are beginning to increase. Among white live births in 1989, 91.7 percent were attended by physicians and 7.5 percent by midwives, as compared with 92.3 and 6.5 percent, respectively, for 1988. Among nonwhites in 1989, physicians attended 84.6 percent of the live births and midwives 10.4 percent, as compared with 89.6 and 8.9 percent, respectively, for 1988 (Table G).

The percentage of live births to unwed mothers continues to increase in both number and rate, for whites and nonwhites. The median age for unwed mothers has increased from 21.3 and 20.5 for whites and nowhites, respectively, in 1979 to 23.1 and 22.4, respectively in 1989 (Table H & I).

PERINATAL
&
INFANT MORTALITY

In Florida, a fetal death certificate is required only when the gestation is 20 or more weeks, whereas a birth certificate is required for all live births regardless of the gestation period. The fetal death ratio has shown a general downward trend over the past decade. The 1989 ratio of 9.3 has decreased 9.7 percent since 1979, even though the actual number of fetal deaths increased by 45.0 percent during the same period (Table J).

A neonatal death is a death which occurs within 28 days after the live birth. The combined total of fetal and neonatal deaths are referred to as "perinatal deaths" in this report, thus ranging from 20 weeks gestation through 27 days after the live birth. Neonatal and perinatal rates both continue their downward trends. These trends were also applicable for whites and nonwhites. The 1989 neonatal death rate has decreased 34.3 percent since 1979, while the perinatal rate has declined 21.5 percent. Both the neonatal and perinatal rates have decreased considerably over the past ten years (Table K).

Infant deaths are those deaths which occur among live births within the first year of life. Despite the variations in the number of infant deaths over the past decade, the infant death rate has continued its downward trend. The 1989 rate of 9.8 per thousand live births has declined 34.2 percent since 1979. Over the same period, whites and nonwhites have shown decreases of 35.0 and 31.2 percent, respectively. Despite these decreases, the rate for nonwhites remains about twice the rate for whites. The overall total and nonwhite infant death rates for 1989 represent the lowest rates ever recorded in Florida. The white infant death rate of 8.0 tied the all-time low rate, which was recorded in 1987.

GENERAL MORTALITY

Resident deaths increased 0.5 percent in 1989 to 132,037 while the death rate decreased 1.9 percent to 10.3 deaths per thousand population. The death rate for 1989 decreased 5.5 percent over the rate of ten years ago. For whites the death rate has shown little change over the past decade, decreasing only 0.9 percent, while the nonwhite death rate has increased by 4.1 percent (Table M).

The age-adjusted death rate (AADR) has remained virtually unchanged since the mid-1980's. AADRs are based on the number of deaths for each age group and take into consideration the changes in the likelihood of death based on the age distribution of the population. All AADRs used in this report are standardized to the U.S. 1940 standard population (Table N).

Data on disposition of remains is available only since 1980. These data show that during this period, the percentage of burials has steadily decreased while cremations has increased. In 1989, 47.0 percent of all recorded deaths resulted in disposition by burial, while 33.4 percent were by cremation. Removal from state accounted for 19.4 percent. By race, burial accounted for 82.5 percent of all nonwhite dispositions as compared to only 42.5 percent for whites. Cremations were more prevalent among whites, accounting for 36.7 percent as compared with only 8.1 percent for nonwhites. Whites also accounted for more removals from state than the nonwhites with percentages of 20.3 and 8.7, respectively (Table O).

In 1989, the three leading causes as well as Pneumonia & Influenza, Suicide, and Homicide, had the same ranking as in 1979. Changes in ranking occurred to C.O.L.D. which rose from fifth to fourth, Diabetes which rose from ninth to seventh, and Human Immunodeficiency Virus (HIV), unranked in 1979, moved into ninth. Accidents fell to fifth from fourth, and Chronic Liver Disease & Cirrhosis fell from seventh to tenth.

Among whites, the three leading causes of death remained the same; Heart Disease, Cancer, and Stroke. C.O.L.D. rose to fourth while Accidents fell to fifth. Pneumonia & Influenza remained at sixth, while Diabetes rose from ninth to seventh. Suicide remained at eighth, while Chronic Liver Disease & Cirrhosis fell from seventh to ninth, and HIV came in tenth.

For nonwhites, the four leading causes of death remained the same; Heart Disease, Cancer, Stroke, and Accidents. HIV became the fifth cause followed by Homicide which fell from fifth to sixth. Diabetes fell from sixth to seventh, while Pneumonia & Influenza remained eighth. Chronic Liver Disease & Cirrhosis fell from seventh to ninth and Suicide remained at tenth.

MARRIAGES
&
DISSOLUTIONS

The number of marriages decreased 0.1 percent from 1988 to 1989 and the number of dissolutions of marriage increased 1.4 percent. The marriage rate dropped 2.7 percent from 11.0 per thousand population in 1988 to 10.7 in 1989. The dissolutions of marriage rate decreased 1.6 percent from 1988 to 1989 resulting in a rate of 6.2 per thousand population (Table LL).

The decrease in the number of marriages combined with the increase in the number of dissolutions has resulted in an increase from 57.0 to 57.9 in the ratio of dissolutions per 100 marriages. This ratio has shown general decline over the past decade.

Many of Florida's dissolutions are granted to persons who establish residency in the state specifically for this purpose. These cases primarily account for the higher ratio of dissolutions per 100 marriages in Florida as compared to the provisional rate of 48.4 nationally in 1989 (Table LL).

Table LL

MARRIAGES AND DISSOLUTIONS OF MARRIAGE, AND RATES PER 1,000 POPULATION, FLORIDA, AND DISSOLUTIONS PER 100 MARRIAGES, FLORIDA AND U.S., 1960, 1970 AND 1979-1989

YEAR	NUMBER OF MARRIAGES	RATES	NUMBER OF DISSOLUTIONS*	RATES	DISSOLUTIONS PER 100 MARRIAGES
